

EConCard

ABSTRACT:

The Online Concession Card Generator is a digital system designed to simplify and automate the process of applying for and issuing concession cards to students. In the traditional method, students face delays due to manual form filling, verification, and physical card distribution. This project aims to resolve these issues by offering a secure, user-friendly online platform.

Students can register, submit their details, and apply for a concession card through the web portal. The system allows the admin (institution authorities) to verify and approve applications digitally. Once approved, the system generates a concession card with student details, photo, and validity in a downloadable format.

This digital approach reduces paperwork, minimizes errors, saves time, and enhances transparency. It also ensures a more accessible and eco-friendly way of managing student concessions.
